

**Amendments to the Specification are as follows:**

Before the first sentence on page 1 please insert the following paragraph.

This application claims the benefit of priority to Japanese Patent Application No. 2003-033344, herein incorporated by reference.

Please amend the paragraph beginning on page 3, line 3 and ending on page 3, line 8 as follows:

Subsequently, the base 55 is adhered to the cushion member 5756 such that the outer peripheral portion of the coil 56 does not come into contact with the arms 54b of the yoke 54, which is fixed to the base 55, while the transparent diaphragm 51 is confirmed via direct observation with the eyes.

Please amend the paragraph beginning on page 3, line 9 and ending on page 3, line 12 as follows:

In this way, a predetermined gap is formed between the magnet 53 fixed to the central portion of the base portion 54a of the yoke 54 and the inner peripheral surface of the coil 5655.

Please amend the paragraph beginning on page 3, line 27 and ending on page 4, line 11 as follows:

However, in the assembling of the conventional electroacoustic transducer, since the base 55 is adhered to the cushion member 5756 such that the coil 56 does not come into contact with the arm 54b of the yoke 54 while the diaphragm 51 is confirmed via direct observation with the eyes, there is a problem in that much time is required for assembling, and the gap between the coil 56 and the arm 54b of the yoke 54 is not uniform. When the gap between the coil 56 and the arm 54b of the yoke 54 is not uniform, the strength of the magnetic field generated in the coil 56 is not uniform. Therefore, it may not be possible to increase the output of sound produced by the vibration of the diaphragm 51.

Please amend the paragraph beginning on page 4, line 14 and ending on page 4, line 19 as follows:

~~The present invention is designed to solve the above problems, and it is an object~~ Embodiments of the present invention to provide an electroacoustic transducer that is capable of removing the non-uniformity of a gap between a coil and a magnet and of vibrating a diaphragm properly, and an electronic apparatus using the same.

Please amend the paragraph beginning on page 7, line 14 and ending on page 7, line 16 as follows:

Fig. 1 is a plan view illustrating a first embodiment of an electroacoustic transducer according to the present invention;

Please amend the paragraph beginning on page 7, line 17 and ending on page 7, line 19 as follows:

Fig. 2 is a cross-sectional view along line I-I' illustrating the first embodiment of the electroacoustic transducer according to the present invention;

Please amend the paragraph beginning on page 7, line 20 and ending on page 7, line 22 as follows:

Fig. 3 is a cross-sectional view along line II-II' illustrating the first embodiment of the electroacoustic transducer according to the present invention;

Please amend the paragraph beginning on page 7, line 23 and ending on page 7, line 25 as follows:

Fig. 4 is a plan view illustrating a second embodiment of an electroacoustic transducer according to the present invention;

Please amend the paragraph beginning on page 7, line 26 and ending on page 7, line 28 as follows:

Fig. 5 is a cross-sectional view along line I-I' illustrating the second embodiment of the electroacoustic transducer according to the present invention;

Please amend the paragraph beginning on page 8, line 1 and ending on page 8, line 3 as follows:

Fig. 6 is a plan view illustrating an example of modification of the electroacoustic transducer according to the present invention;

Please amend the paragraph beginning on page 8, line 4 and ending on page 8, line 6 as follows:

Fig. 7 is a cross-sectional view along line I-I' illustrating a first embodiment of an electronic apparatus according to the present invention;

Please amend the paragraph beginning on page 8, line 7 and ending on page 8, line 9 as follows:

Fig. 8 is a cross-sectional view illustrating a second embodiment of the electronic apparatus according to the present invention;

Please amend the paragraph beginning on page 8, line 10 and ending on page 8, line 12 as follows:

Fig. 9 is a cross-sectional view illustrating a third embodiment of the electronic apparatus according to the present invention; and

Please amend the paragraph beginning on page 13, line 14 and ending on page 13, line 21 as follows:

In addition, since the other end 2c of the diaphragm 2 is supported on the rigid body 10, the base 11 can be mounted on the basis of the rigid body 10, and a positional error of the base 11 with respect to the diaphragm 2 can be removed. Thus, the opening 11a will not deviate from an opening 27b27e

for exposing the liquid crystal panel 25a of the electronic apparatus 25 that will be described later.
